

**Fractions Menu Task:**

Build as *few* fractions as possible to satisfy each constraint at least once.

A.	Equivalent to $\frac{1}{4}$	B.	Is closer to 1 than to $\frac{1}{2}$
C.	Has a denominator greater than 6	D.	Is less than $\frac{1}{2}$
E.	Is greater than $\frac{3}{4}$	F.	Has a numerator less than 4

*Which constraints pair nicely?*

*Which constraints cannot be paired?*

*Is it possible to solve in 2, 3 or 4 fractions?*

Describe how and why you built each fraction.

Be sure to identify which fractions satisfy which constraints.
